

Public Notice: SWSC Water System Improvements – Distribution Line Replacement (5 Mile Rd)

Name of Project and community: SWSC Water System Improvements – Distribution Line Replacement (5 Mile Rd), Sharyland Water Supply Corporation

Name of DWSRF administering agency: Texas Water Development Board

Funding in whole or in part by DWSRF through EPA: Partially funded by DWSRF from the EPA and the TWDB

Brief description of project: This component of the larger SWSC Water System Improvement effort involves replacing aging distribution lines in the 5 Mile area between Conway Ave. and Taylor Rd. The goal is to improve distribution capacity for continuous development / growth, system efficiency, reduce service disruptions, and ensure continued delivery of safe drinking water.

Brief listing of water quality benefits: The improvements will lead to more consistent water pressure and greater system reliability for residents in the area. By replacing deteriorating lines, we expect a reduction in leaks and unplanned service outages. These upgrades will also help lower long-term maintenance and operating costs. In addition, they support the broader goal of protecting local water resources and enhancing environmental health across the community.
